GitHub Profile

Profile Summary

Full Stack Developer undergraduate at Uva Wellassa University with hands-on experience building scalable web applications using React, Node.js, and Python based backends. Experienced in developing full stack and real-time systems, with strong foundations in OOP and Data Structures. Skilled in REST API development, database design, and Docker based deployment. Able to quickly adapt to new technologies and contribute to real world systems from day one. Seeking a Full Stack Developer internship to apply and expand full stack development skills.

Technical Skills

Frontend : React.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend : Node.js, Express.js, FastAPI, ASP.NET

Programming Languages: JavaScript, Python, Java, C, C#

Databases : MongoDB, PostgreSQL, MySQL, SQLite

Tools & DevOps: Git, GitHub, Docker, AWS (Basic), Postman, Linux, VS Code

Projects & Experience

AI-Powered Financial Fraud Detection System

NOV 2025 - Present

- Designed and implemented PostgreSQL database models and schema for efficient transaction storage and retrieval.
- Developed RESTful API endpoints for transaction input and CRUD operations, enabling seamless backend communication.
- Integrated improved machine learning model with backend APIs to support real-time fraud detection.
- Built FraudNet graph visualization module for interactive analysis of suspicious transaction patterns.

Role: Full stack Developer & Tester

Technologies: FastAPI, Python , React 18, PostgreSQL , REST APIs, Docker, Git

Project Link: <https://github.com/deep-scan-ai/ai-powered-fraud-detection>

Inventory Management System

JUN 2025 - JUL 2025

- Developed a desktop based inventory system with role based access control and real time stock monitoring for SMEs.
- Designed and implemented modular OOP architecture with an intuitive JavaFX UI,improving usability and maintainability.
- Integrated local database (SQLite/MySQL) for efficient data storage, retrieval, and transaction handling.
- Built comprehensive testing suite using JUnit 5, achieving high test coverage and ensuring system reliability.

Role: Full stack Developer & Tester

Technologies: Java, JavaFX, Local Database (SQLite/MySQL), OOP, JUnit 5, Git

Project Link: <https://github.com/logicsimplifier/inventory-management-system>

Boolean Logic Solver & Digital Hardware Simulator

JUN 2025 - SEP 2025

- Engineered a desktop application for Boolean simplification (Algebraic, Truth Table, K-Map) and real-time circuit simulation.
- Built a simulation engine supporting 15+ logic gate components with sub-100ms response time and an interactive drag-and-drop interface.
- Developed and integrated a 4-variable Boolean expression simplification engine applying standard logic laws with step-by-step transformations, achieving 95–99% accuracy in results and enabling real time computation.

Role: Full stack Developer & Tester

Technologies: Electron.js + React.js, Python, Git / GitHub

Project Link: https://github.com/logicsimplifier/boolean_logic_solver

Smart Food Delivery Platform

NOV 2024 - JUL 2025

- Built a full-stack food ordering platform serving 100+ students with QR-based cashless payments and nutrition tracking.
- Developed admin dashboard and mobile/web applications, reducing order processing time by 40% and achieving 95% order accuracy.
- Designed and implemented full-stack features across frontend and backend, including real-time order management using WebSockets for kitchen staff and delivery riders.

Role: Full stack Developer

Technologies: MERN Stack, Tailwind CSS, RESTful APIs

Project Link: <https://github.com/uwufts22/uwufood-web-frontend>

Education

Bachelor of Information and Communication Technology (Honours) Degree

2023 - 2027

Uva Wellassa University of Sri Lanka

Trainee - Full Stack Developer Programme

2025 - Present

Moratuwa University of Sri Lanka

GCE Advanced Level (Engineering Technology Stream)

2018 - 2021

C.W.W. Kannangara Central College Mathugama.

Cetification

Programming in Python - 1. Python for Beginners, University of Moratuwa

JUL 2025 - NOV 2025

KodeKloud Engineer - Docker (Level 1), KodeKloud

OCT 2025 - NOV 2025
